

This stage starts with a series of long straights and flowing corners but tightens and becomes very three dimensional as it begins to climb toward the pass. The last half of the stage is rough with many imbedded and loose rocks, blind crests, and blind jumps, many of which are cautioned. Watch for the closely linked corners at 5.91. Another tricky combination is the BigJump at 7.10 which is blind. The end of the stage has several big dips that are rough and will be entered with downhill speed, so be warned!
